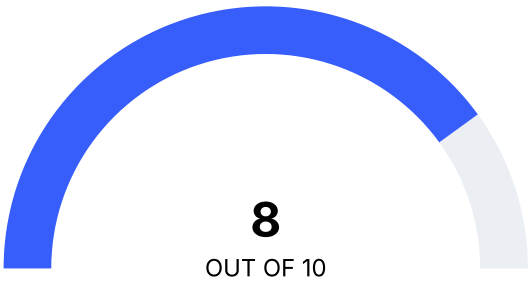
Candidate name	Job Title	Date
Adesh Katiyar	Sr. Software Engineer - Fullstack	Thursday, February 19th, 2026

Assessment

Interview score **8** OUT OF 10

AI Summary



Technical Skill	3 / 5
Problem Solving	3 / 5
Code Quality	3 / 5
Communication Rating	4 / 5

Interview Summary

Language/Framework... 3

Software Engineering 3

Frontend Concepts 3

HIGHLIGHTS

good comm skills
Good understandimng of architecture
Good in azure service bus
good in Database
Good in react
Good in microservices
Good in .net and language fundamnetal
Good in EF

SCOPE OF IMPROVEMENT

good candidate

Language/Framework Fundamentals

C# | ENTITY FRAMEWORK | MVC

3 OUT OF 5
Performance Meets Expectations

OVERALL FEEDBACK

Good in .net and language fundamnetal
Good in EF

Candidate has Good knowledge

QUESTION 1

would there be any (Lock) Performance Issue under below Scenario:
where To fix race condition, someone added:

```
private static object _lock = new object();

public void Increment()
{
   lock(_lock)
   {
      Counter++;
   }
}
```

Under heavy load, performance dropped significantly.

Questions:

Why does performance degrade?

What is lock contention?

What alternative would you suggest?

Would ConcurrentDictionary help here?

When should you avoid lock?

FEEDBACK

Knows it well

Candidate has Good knowledge

QUESTION 2

A user's role changes, but existing JWTs are still valid.
How would you handle this scenario?

FEEDBACK

Knows it well

Candidate has Good knowledge

QUESTION 3

How does Parallel.ForEach() differ from Task.WhenAll()?
How to call multiple downstream services in parallel?
Scenario (Order → Inventory service + Payment service)

FEEDBACK

Knows it well

Candidate has Good knowledge

QUESTION 4

Can we use await inside a Parallel.ForEach loop? explain in detail?

FEEDBACK

knows about it

Candidate has Good knowledge

QUESTION 5

Scenario: Seeding Initial Data in Migrations
You want to insert some default roles and settings during DB creation. How can you do this in EF Core?

FEEDBACK

Knows well about it

Candidate has Good knowledge

QUESTION 6

What are the advantages of using Entity Framework Core over traditional ADO.NET and vice versa?

FEEDBACK

Knows it well

Software Engineering

3 OUT OF 5

Performance Meets Expectations

OVERALL FEEDBACK

good in azure service bus
good in microservices
good in db concepts

Candidate has Good knowledge

QUESTION 1

You have 20 microservices.

Questions:

Why do you need an API Gateway?
What responsibilities should API Gateway have?
How do you implement authentication? At gateway or service level?

FEEDBACK

knows well about api gateway and its use case

Candidate has Good knowledge

QUESTION 2

You have an orders table with frequent reads and writes.
How do you design indexes without hurting write performance?
How do you decide which columns to index? What are the trade-offs? What are cov ering indexes, and when would you use them?

FEEDBACK

knows about indexing stretegy, covering index

Candidate has Good knowledge

QUESTION 3

How does SQl handle concurrent access to the database?
tell me how does transactions, locks, and isolation levels works ?

FEEDBACK

knows well about isolation level and locking

Candidate has Good knowledge

QUESTION 4

What is dynamic SQL, and how is it implemented?

What are the security risks of dynamic SQL, and how can you mitigate them?

FEEDBACK

knows well about dynamic sql

Candidate has Good knowledge

QUESTION 5

In which scenario you will use Azure Service BUS?
What is Topic and subscription in Azure service bus?

FEEDBACK

Knows it well

Candidate has Good knowledge

QUESTION 6

How do dead-letter queues work with topics and subscriptions in Azure Service Bu s?

FEEDBACK

Knows it well

Candidate has Good knowledge

QUESTION 7

how to Troubleshooting Message Loss in Azure Service Bus?
How do dead-letter queues work with topics and subscriptions in Azure Service Bu

s?

FEEDBACK

knows well about dead letter queue

Candidate has Good knowledge

QUESTION 8

How will you ensure that messages are processed in the order they are sent?

FEEDBACK

knows it well

Candidate has Good knowledge

QUESTION 9

How do you ensure that messages sent to Azure Service Bus are not lost?

FEEDBACK

knows it well

Frontend Concepts

3 OUT OF 5

Performance Meets Expectations

OVERALL FEEDBACK

good in react concepts

Candidate has Good knowledge

QUESTION 1

Please build a React component that:
Fetches the user list when the component loads
Displays the users in a list
Provides a search input to filter users by name
Implements debounced search (300ms)
Do not use external debounce libraries
Shows appropriate:
Loading state while fetching data
Error state if the API fails
Is written with clean, readable, and maintainable code
Considers performance, assuming the list can be large

this is the list.json

```
[
  { "id": 1, "name": "Ratan", "role": "Admin" },
  { "id": 2, "name": "Amit", "role": "User" }
]
```

Constraints

Use functional components

Use React Hooks

No external state management libraries

No external debounce utilities

FEEDBACK

good in react

CANDIDATE CODE

```
//hooks

const useDebounce=(value, delay)=>{

const [debounceVlue, setDebouncValue]=useState(value);

useEffect(()=>{

const timer=setTimeout(()=>{

setDebouncValue(value);

}, delay)

return ()=>clearTimeout(timer);

} [value, delay]);
```

Candidate has Good knowledge

QUESTION 2

When would you prefer CSR over SSR, even in a Next.js app?

FEEDBACK

knows about it

Candidate has Good knowledge

QUESTION 3

A route change feels slow. How would you debug and improve routing performanc e?

FEEDBACK

knows about it

Candidate has Good knowledge

QUESTION 4

When would you choose Context API over Redux, and when would Redux be a bette r choice?

FEEDBACK

knows about it
