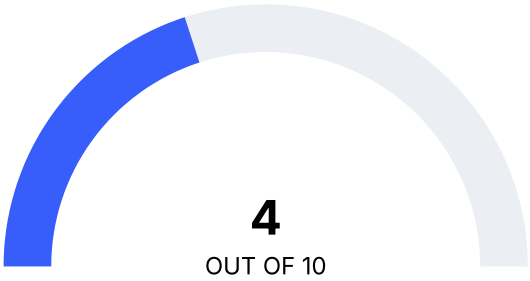
Candidate name	Job Title	Date
Puneet Bhadouriya	Sr. Software Engineer - Fullstack	Thursday, February 19th, 2026

Assessment

Interview score **4** OUT OF 10

AI Summary



Technical Skill	2 / 5
Problem Solving	2 / 5
Code Quality	2 / 5
Communication Rating	3 / 5

Interview Summary

Language/Framework... 2

Software Engineering 2

Frontend Concepts 2

HIGHLIGHTS

Good Comm skills
Good in language fundamental and threading
average in EF core

SCOPE OF IMPROVEMENT

Poor in Angular
poor in Azure concepts
Poor in indexing design concepts

Language/Framework Fundamentals

C# | ENTITY FRAMEWORK | MVC

2 OUT OF 5
Performance Is Average

OVERALL FEEDBACK

Good in language fundamental and threading
average in EF core

Candidate has Basic knowledge

QUESTION 1

would there be any (Lock) Performance Issue under below Scenario:
where To fix race condition, someone added:

```
private static object _lock = new object();

public void Increment()
{
   lock(_lock)
   {
      Counter++;
   }
}
```

Under heavy load, performance dropped significantly.

Questions:

Why does performance degrade?

What is lock contention?

What alternative would you suggest?

Would ConcurrentDictionary help here?

When should you avoid lock?

FEEDBACK

Knows about it

Candidate has Good knowledge

QUESTION 2

What is a task ?
How does Parallel.ForEach() differ from Task.WhenAll()?
How to call multiple downstream services in parallel?
Scenario (Order → Inventory service + Payment service)

FEEDBACK

knows about Task and thread pool and use case of task.WhenAll And Parallel.foreach

Candidate has Basic knowledge

QUESTION 3

Why there is memory leak when GC exists?

FEEDBACK

Knows about gc and dispose

Candidate has No knowledge

QUESTION 4

Describe how you would handle service versioning in a microservices architecture. Suppose You're designing a REST API in .NET Web API for a product-based microse rvice.

v1 should offer only basic API functionality

v2 should offer basic + premium functionality

v3 should offer all features (basic + premium + exclusive)

Using URL-based versioning (/api/v1/products, /api/v2/products, /api/v3/products):

How would you design and implement this versioning strategy?

How would you handle shared logic across versions?

How would you document it in Swagger/OpenAPI?

What are pros and cons of URL-based versioning compared to other strategies?

FEEDBACK

knows about versioning
not aware with the diff between header based vs rout bases use case scenario
not aware with how he handles common shared logic

Candidate has Basic knowledge

QUESTION 5

How to Add a custom header to all responses in .net core?
what would be the order of this custom middleware in the pipeline?

FEEDBACK

knows about middleware concepts

Candidate has Basic knowledge

QUESTION 6

Can we use await inside a Parallel.ForEach loop? explain in detail?

FEEDBACK

Knows about it

Candidate has Basic knowledge

QUESTION 7

Scenario: You want to track audit fields like CreatedBy, CreatedDate automatically f or all entities. How will you do that?

FEEDBACK

Knows it partially

Candidate has No knowledge

QUESTION 8

Scenario: You need to update only a few fields via PATCH API

You have a PATCH endpoint to update only 1 or 2 fields of a large entity. What's the best way to handle this in EF Core?

FEEDBACK

not aware with it

Candidate has Good knowledge

QUESTION 9

Your .NET API allows multiple users to update the same resource. Sometimes one u ser overwrites another's changes. How can you prevent this?
If User A and User B both load the same customer record:

User A changes Name → "John" and saves.

User B changes Email → "john@email.com" and saves.

Without concurrency control, User B's save will overwrite User A's Name change (be cause the whole row is updated).

FEEDBACK

knows about Optimistic Concurrency in EF Core

Candidate has Basic knowledge

QUESTION 10

A user's role changes, but existing JWTs are still valid.
How would you handle this scenario?
What is a refresh token used for ?

FEEDBACK

Knows about refresh token use case
knows about handling of this use case

Software Engineering

2 OUT OF 5
Performance Is Average

OVERALL FEEDBACK

Good in API concepts
Poor middleware error handling
poor azure concepts
Average DB concepts
Poor indexing concepts

Candidate has Good knowledge

QUESTION 1

You are building a Payment API. A client retries the same request due to network fail ure.

Questions:

How will you ensure the payment is not processed twice?

FEEDBACK

knows about it

Candidate has Basic knowledge

QUESTION 2

A request passes through multiple middlewares (auth, validation, logging).
One middleware throws an error.
How does it decided which middleware runs next?

FEEDBACK

not much aware about error handling

Candidate has Basic knowledge

QUESTION 3

You have an orders table with frequent reads and writes.
How do you design indexes without hurting write performance?
What are covering indexes?

FEEDBACK

Basic understanding of indexes not much aware with how he decide to apply non clustered index
not aware with Covering Indexes

Candidate has Basic knowledge

QUESTION 4

what is a window function in sql ?
what is cte and recursive CTE ? explain use case scenario?

FEEDBACK

Knows about CTE
not aware with Window Function or recursive CTE

Candidate has Basic knowledge

QUESTION 5

What is Cold Start in Azure Function ? how do you mitigate cold start?
When not to use azure function?

FEEDBACK

Knows about cold start
not much aware with use case of Azure function

Candidate has No knowledge

QUESTION 6

What is the difference between input and output bindings in Azure Functions?
what is difference between Bindings and trigger ?
Your company wants to process data as it arrives in a Blob Storage. How can Azure Functions help?

FEEDBACK

not aware with bindings

Candidate has No knowledge

QUESTION 7

In which scenario you will use Azure Service BUS?
What is Topic and subscription in Azure service bus?

FEEDBACK

not aware with it

Candidate has No knowledge

QUESTION 8

What are difference between queues and topics ? explain the use case

FEEDBACK

not aware with it

Frontend Concepts

2 OUT OF 5
Performance Is Average

OVERALL FEEDBACK

Poor angular concepts
Not worked much on Angular

Candidate has No knowledge

QUESTION 1

Scenario: Multiple API calls in parallel
Q: You need to fetch user details, profile settings, and permissions simultaneously a nd proceed only when all are received. How would you implement this?

FEEDBACK

Not aware with it

Candidate has No knowledge

QUESTION 2

A user starts filling out a form but navigates away accidentally. How would you prev ent losing unsaved changes?

FEEDBACK

not aware with it

Candidate has No knowledge

QUESTION 3

Your component subscribes to multiple observables. What will you do to prevent me mory leaks?
What is the use case of TakeUntil ?

FEEDBACK

Not aware with use case of take until

Candidate has Basic knowledge

QUESTION 4

How do you globally catch and handle HTTP errors in Angular?

FEEDBACK

knows about it

Candidate has No knowledge

QUESTION 5

How do you load components dynamically in angualr?

FEEDBACK

Not aware with it
